EDUCATION

Arizona State University

Aug 2021 - May 2025

B.S. Computer Science (Dean's List, GPA 3.74/4)

Tempe, Arizona

WORK EXPERIENCE

B:Side Capital | *Full-Stack Software Engineering Intern*

Denver, CO | Sept 2024 - present

- Engineered a **production-grade** CRM platform with Typescript & Plaid to deliver financial intelligence on **\$100M+** in client assets.
- Developed a **Node-based** backend (scaled to handle 100k reqs/day) for authentication, database operations, payments & real-time messaging.
- Utilized Python, LangChain & Delphi to craft a multi-modal **RAG** chat service.
- Employed **Ansible**-based CI/CD pipelines & automated resource provisioning, zeroing down deployment issues.

IDEXX | *Embedded Systems Engineering Intern*

Portland, ME | June - Aug 2024

- Developed internal tools for LAN-based messaging, remote control & continuous monitoring of **Linux**-based veterinary instruments.
- Re-architected legacy microservices for **system-level simulation** into a robust **MVC** model using C++ & Lua.
- Designed a priority-based **queueing system** to optimize HTTP/TCP request handling, boosting throughput & service stability by $\approx 40\%$.

Indian Institute of Technology | *Machine Learning Engineering Intern*

Delhi, India | May - July 2023

- Employed Python & **Graph Neural Networks** to optimize UKs power systems networks by **25%** based on socio-economic factors & predictive data analytics.
- Built batch **ETL pipelines** to feed SQL data into ML models for **severity classification** of parameters such as capacity, emissions, & coupling.
- Leveraged linear optimization to simulate network load balancing, increasing energy generation by $\approx 35\%$.

Arizona State University | *CSE360 - Undergraduate Teaching Assistant*

Tempe, AZ | Jan - May 2024

- Mentored 150+ students on **Agile** methodologies, lifecycle traceability, QA, & risk assessment frameworks.

SKILLS

Languages: C++, Python, JavaScript, SQL

Frameworks: ASP.NET, Node.js, Next.js, React

Libraries: Flask, NetworkX, OpenCV, Scikit-Learn, Tailwind

Tools: NoSQL, AWS, Jira, Ansible, Docker, Git, Hadoop, Linux, Kafka, Spark

PROJECTS

StockSage | *Next.js, Python, Social Media Mining*

- Built a full-stack app using **sentiment analysis** (from Reddit, X & market data) that predicts future prices with $\approx 70-75\%$ accuracy.
- Integrated a back-tested investment framework with **XGBoost**, user-defined thresholds, & real-time NSE data to optimize trading strategies.

Legal AI | *MLH Google Cloud Track Winner, HackHarvard* | *React, Python, Google Cloud*

- Developed a conversational web app for rapid & precise legal guidance, leveraging Google Cloud & a custom-trained PaLM model.
- Features include **fine-tuning LLMs** for precision, Elasticsearch, & **indexing** for faster responses & **IaC** techniques for hassle-free deployment.
- Built **recommendation engines** on Vertex AI, integrating geolocation & query severity to then connect users with help.
